

Skip Counting Strips: These are one strategy to use for multiplication. The next example is one of how to utilize these Skip Counting Strips with Touch Math Points.

As you use the strips for Touch Math Multiplication, say the skip counting facts in order. If there are five points, then you would touch each point simultaneously saying 5, 10, 15, 20, 25.

The videos by Kristina Cotran do a very nice job explaining how to use Skip Counting Strips in conjunction with multiplication problems (using the Touch Math system).
