Copy of Notes

12/19

1. What is true about the slopes of parallel lines? Perpendicular lines?

// lines have congruent slopes

L lines have opposite reciprocal slopes

2. Write the equation of a line, *l*, passing through the points (3, 2) and (9, 4). Use of the grid below is optional.

stat → edit → L1 → X values
→ L2 → Y values

→ enter

Slope = $\frac{2}{6} = \frac{1}{3}$

$y = \frac{1}{3}x + 1$

$y = \frac{1}{3}x - 2$

a. Write the equation of a line parallel to line *l* through the point (6, 0).

$y = \frac{1}{3}x - 2$

b. Write the equation of a line perpendicular to line *l* through the point (1, 2).

$y = \frac{-3}{1}x + 5$

3. Write the equation of a line, m , passing through the points $(3, 1)$ and $(8, -1)$. Use of the grid below is optional.

$$\text{Slope} = -\frac{2}{5}$$

$y = mx + b$ ← standard equation of a line.

$$y = -\frac{2}{5}x + b$$

$$y = -\frac{2}{5}x + 2.2 \text{ (line } m)$$

- a. Write the equation of a line parallel to line m through the point $(5, -1)$.

$$y = -\frac{2}{5}x + 1 \text{ - line } g$$

same slope for
|| lines

- b. Write the equation of a line perpendicular to line m through the point $(2, 8)$.

$$y = \frac{5}{2}x + 4 \text{ - line } r$$

opposite reciprocal slope
for \perp lines

4. Write the equation of the perpendicular bisector of the segment connecting $(-7, -3)$ and $(3, -3)$.

$$y = -3 \text{ (original line segment)}$$

$$x = -2 \text{ (perpendicular bisector)}$$

5. Write the equation of the perpendicular bisector of the segment connecting $(1, 2)$ and $(3, -2)$. Use of the grid below is optional.

$$\frac{-4}{2} = -\frac{2}{1} = -2$$

$$y = -2x + 4$$

$$y = \frac{1}{2}x - 1$$
