

# Web Filtering at Home

CCS Technology has added another layer of Internet filtering to Chromebooks when students are off campus. This is in addition to the filtering and monitoring that was already in place.

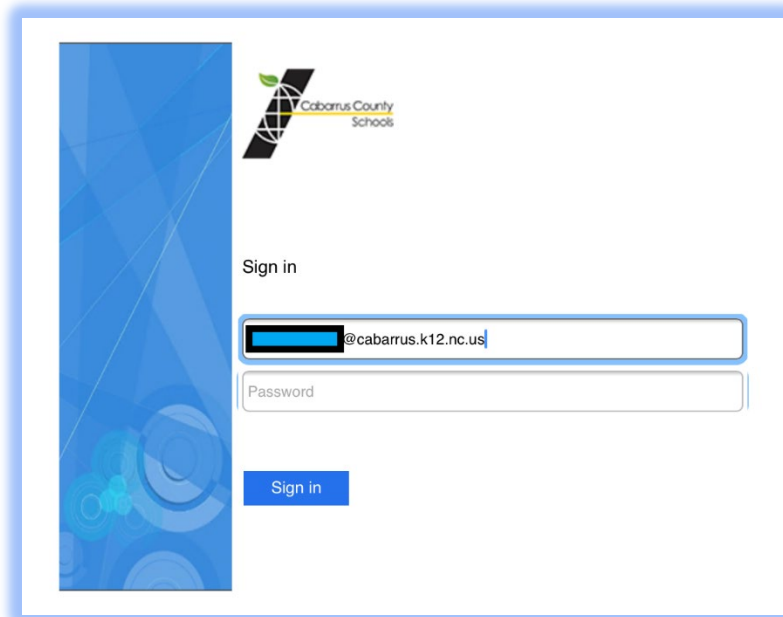

**With this addition, Internet filtering will now be the same whether the student is on or off campus. However, when a student is off campus, the login process will be different. Instructions are provided below.**

- Chromebook users will be presented with a Sign In screen each time they connect to the Internet at home or any other off campus location.

The screenshot shows a 'Sign In' screen with a green border. At the top left is a green person icon followed by the text 'Sign In'. Below this is a message: 'To keep you safe from internet threats, please sign in to your company's security service.' There is a horizontal line below the message. Underneath is the label 'User Name' followed by a text input field containing the email address 'student@cabarrus.k12.nc.us'. Below the input field is a blue button with the text 'Sign In'. At the bottom of the screen, there is a link: 'Need help? Contact your IT support.'

- When the student sees this screen, put in your **@cabarrus.k12.nc.us** email address and click Sign In.
- The normal ADFS login screen will pop up. Put in your username and password just as if you are at school.

The screenshot shows an ADFS login screen for Cabarrus County Schools. On the left is a blue vertical banner with a geometric pattern. To the right of the banner is the Cabarrus County Schools logo, which consists of a stylized globe icon and the text 'Cabarrus County Schools'. Below the logo is the text 'Sign in'. There are two input fields: the first is for the username, containing a redacted name followed by '@cabarrus.k12.nc.us', and the second is for the password, labeled 'Password'. Below the input fields is a blue button with the text 'Sign in'.
