

Irrigation

We have an automated system for irrigation at A.T. Allen. The pump station (painted blue) is located just inside the garden to the left of the sidewalk. The timer system is already pre-set and controls should NOT be touched or changed by anyone. Each water hose has its own time controls set to run in the evenings and is connected to either a sprinkler or soaker hose. Students should not make any changes to the location of the sprinklers/soaker hoses and should be careful when walking around them. The pump handle should always be left in the UP position.
