KEIKO WILKINS

Keiko Wilkins - a marine biologist and current PhD student at the University of Hawai'i at Mānoa within the Marine Biology Graduate Program. Keiko is a research assistant within the Richmond Laboratory at Kewalo Marine Laboratory. Her dissertation research explores the effects of microplastics and their associated-chemicals on coral reef health and resilience. She previously earned her B.S. and M.S. degrees in Biology from Miami University (Oxford, OH) exploring zooplankton community trends in lakes within the Pocono Mountains (Lake Ariel, PA). In addition to her research, Keiko is passionate about serving as a role model for underrepresented students, despite limited representation.
