

CLEANING

AND

DISINFECTING

WHEN AND HOW TO CLEAN AND DISINFECT
COMMON AREAS

Cleaning refers to the removal of germs, dirt, and impurities from surfaces

Cleaning does not kill germs, but by removing them, it lowers their numbers and the risk of spreading infection

Disinfecting refers to using chemicals to kill germs on surfaces

Disinfecting does not clean dirty surfaces or remove germs, but can lower the risk of spreading infection by killing germs on a surface after cleaning

Step 1: Wear disposable gloves when cleaning and disinfecting

Step 2: To clean, use a detergent or soap and water prior to disinfection

Step 3: To disinfect, use diluted household bleach solutions, alcohol solutions with at least 70% alcohol, and most common EPA registered household disinfectants

Step 4: Clean and disinfect frequently touched surfaces such as tables, doorknobs, light switches, remotes, handles, desks, toilets, faucets, sinks, and hard back chairs
