RFI 63..... Drawing A1.2 shows that Machine Room B-106's width and Machine Room B-111's depth will have to increase to 6'-0" to meet the code-required clearances around the equipment. Will this change will be made via addendum?
Answer.....The manufacturer has indicated that the room dimensions of B-106 and B-111 are sufficient.

RFI 64..... The project specifications specify a holeless elevator. As such the drawings need to be revised to accommodate this type of elevator.
.....A). For Elevator B-107, the minimum overhead clear requirement is 15'-4" based on 15'-0" travel and 4'-0" pit depth. Even if the hoist beam were to be removed and a 5'-0" pit depth was applied, the minimum overhead would be dropped to 14'-4". This would still not work as the measurement from the top floor landing to the roof (nearest obstruction) is 13'-8". Due to this, I wanted to provide an alternative.
-If a 6'-0" pit depth was applied instead of 4'-0", then the minimum required overhead would be 13'-4". With the hoist beam removed, this minimum overhead is achievable.
.....B). For Elevator B-110A, the minimum overhead clear requirement will be 13'-4" based on 13'-0" travel and 4'-0" pit depth. While the hoist beam would also need to be removed, the ledge on the roof is the main issue. Currently, due to that ledge being in the hoistway the overhead is only 12'-1". See attached for a snip from drawing sheet A2.1 for reference.
-If possible, we recommend removal of the ledge or moving the hoistway forward from the ledge. If done, the measurement from the top floor landing to the roof increases to 14'-0". The minimum overhead can be achieved at this point.
Answer.....A) For Elevator B-107, the pit depth has been revised to -6'-0". B) For Elevator B-110A, the beam at roof level has been shifted out of the required shaft dimensions. See revised A2.1 and S1.1.

RFI 65..... Detail 2A/A2.2 shows an elevation view of room A-101. Letters spelling 'The Kitchen' are on top of a shelf. A detail through these letters (31/A14.8) is spelling 'Farm'. Please clarify if the letters 'Farm' are used anywhere in the project.

Answer.....*AV controls will be Owner Furnished and Contractor Installed.*

RFI 72. Per plans-Flat panel display-Detail 51/A14.8 is showing a mounting detail for a flat panel display but it is unclear where this is intended for as the AV spec section 115200 only calls out for projectors and floor plans E2.5 and E2.6 do not show any display locations. RFI 74. We have reviewed the drawings and specifications for the projects regarding the elevators. Drawings show that the existing elevator is to be replaced with a KONE machine room less elevator (MRL). The existing elevator is a Montgomery hydraulic elevator. RFI 76. Window Type GG + HH: Is it preferred that the lower section of the WP-1 translucent wall panel system be factory unitized to include both the translucent panel and fixed windows? Pre-assembled units can be delivered to the site for quick installation, saving both time and money. The standard windows meet AAMA/ANSI Performance Class: PI-AW60, PO-AW70, and F-AW80. To meet the specific design loading criteria provided for the project, the unitized system at Opening GG (only) would require 3-1/4 integral stiffener battens or a mid-span member by others (can be located above the windows) to span the 13' opening with (2) fixed sash (using a 2-3/4" panel system). If a factory unitized system is desired, please

indicate whether the 3-1/4" IS or mid-span member by others is desired. Enclosed are standard details for your review.

RFI 115..... Window Type GG + HH: Is it preferred that the lower section of the WP-1 translucent wall panel system be factory unitized to include both the translucent panel and fixed windows? Pre-assembled units can be delivered to the site for quick installation, saving both time and money. The standard windows meet AAMA/ANSI Performance Class: PI-AW60, PO-AW70, and F-AW80. To meet the specific design loading criteria provided for the project, the unitized system at Opening GG (only) would require 3-1/4 integral stiffener battens or a mid-span member by others (can be located above the windows) to span the 13' opening with (2) fixed sash (using a 2-3/4" panel system). If a factory unitized system is desired, please indicate whether the 3-1/4" IS or mid-span member by others is desired. Enclosed are standard details for your review.

RFI 117..... Sheet A8.4 shows vertical sunshades with detail 24/A9.2. - Detail is not a sun shade and does not fit to any location shown to take sun shades. Will the correct detail be provided so the bidders know what the sun shades are?

Answer.....*A detail for sunshades has been added to A9.26.*

RFI 118..... On sheet A4.1 elevation 3, there is a window with a missing tag. What window is this? See attached drawing for reference.

Answer.....*Window tag at 2nd floor window between grid line 9.3 and 9.1 was updated to DD through Addendum 01.*

RFI 119..... Sheet A8.4 shows details all over the page that don't fit the locations noted and can't be used for the windows. - Will the Architect review the attached sheet and look up each blue highlighted detail and correct them with details that work for the locations shown? Page can't be bid correctly with information currently on sheet. - provide the correct detail for the sun shades.

Answer.....*See revised A8.4. A detail for sunshades has been added to A9.26.*

RFI 120..... Please advise what steel falls under the "Delegated Design" as identified in the steel specs 05 12 00 - 2, 1.6, D.

   PICTOGRAMS AND THEIR FIELD SHALL HAVE A NON-GLARE FINISH, PICTOGRAMS SHALL CONTRAST WITH THEIR FIELD WITH EITHER A LIGHT PICTOGRAM ONA DARK FIELD OR A DARK PICTOGRAM ON A LIGHT FIELD.

   PICTOGRAMS SHALLHAVE TEXT DESCRIPTIORS LOCATED DIRECTLY BELOW THE PICTOGRAM FIELD.

4. **CHARACTER PLACEMENT:**CHARACTER SPACING SHALL BE MEASURED BETWEEN THE TWO CLOSEST POINTS OF ADJACENT RAISED CHARACTERS WITHIN A MESSAGE, EXCLUDING WORD SPACES. WHERE CHARACTERS HAVE RECTANGULAR CROSS SECTIONS SPACING BETWEEN INDIVIDUAL CHARACTERS SHALL BE 1/8 INCH (3.2 mm) MINIMUM, AND 4 TIMES THE RAISED CHARACTER STROKE WIDTH MAXIMUM WHERE CHARACTERS HAVE OTHER CROSS SECTIONS, SPACING BETWEEN INDIVIDUL RAISED CHARACTERS SHALL BE 1/16 INCH (1.6 mm) MINIMUM AND 4 TIMES THE RAISED CHARACTER STROKE WIDTH MAXIMUM AT THE BASE OF THE CROSS SECTIONS, AND 1/8 INCH (3.2 mm) MINIMUM AND 4 TIMES THE RAISED CHARACTERS STROKE WIDTH MAXIMUM AT THE TOP OF THE CROSS SECTIONS. CHARACTERS SHALL BE SEPARATED FROM THE RAISED BORDERS AND DECORATIVE ELEMENTS 3/8 INCH (9.5 mm) MINIMUM.

   LINE SPACING BETWEEN THE BASELINES OF SEPARATE LINES OF RAISED CHARACTERS WITHIN A MESSAGE SHALL BE 135 PERCENT MINIMUM AND 170 PERCENT MAXIMUM OF THE RAISED CHARACTER HEIGHT.

   FORMAT OF TEXT SHALL BE IN A HORIZONTAL FORM.

   TACTILE CHARACTERS ON SIGNS SHALL BE LOCATED 48 INCHES (1219 mm) MINIMUM ABOVE THE FINISH FLOOR OR GROUND SURFACE, MEASURED FROM THE BASELINE OF THE LOWEST BRAILLE CELLS AND 60 INCHES (1524 mm) MAXIMUM ABOVE THE FINISH FLOOR OR GROUND SURFACE, MEASURED FROM THE BASELINE OF THE HIGHEST LINE OF RAISED CHARACTERS.

   WHERE TACTILE SIGN IS PROVIDED AT A DOOR, THE SIGN SHALL BE LOCATED ALONGSIDE THE DOOR AT THE LATCH SIDE. WHERE A TACTILE SIGN IS PROVIDED AT DOUBLE DOORS WITH ONE ACTIVE LEAF, THE SIGN SHALL BE LOCATED ON THE ACTIVE LEAF. WHERE A TACTILE SIGN IS PROVIDED AT DOUBLE DOORS WITH TWO ACTIVE LEAFS, THE SIGN SHALL BE LOCATED TO THE RIGHT HAND DOOR. WHERE THERE IS NO WALL SPACE AT THE LATCH SIDE OF A SINGLE DOOR OR AT THE RIGHT SIDE OF DOUBLE DOORS, SIGNS SHALL BE LOCATED ON THE NEAREST ADJACENT WALL. SIGNS CONTAINING TACTILE CHARACTERS SHALL BE LOCATED SO THAT A CLEAR FLOOR SPACE OF 18 INCHES (457 mm) MINIMUM BY 18 INCHES (457 mm) MINIMUM, CENTERED ON THE TACTILE CHARACTERS, IS PROVIDED BEYOND THE ARC OF ANY DOOR SWING BETWEEN THE CLOSED POSSITION AND 45 DEGREE OPEN POSITION. WHERE PERMANENT IDENTIFICATION SIGNAGE IS PROVIDED FOR ROOMS AND SPACES THEY SHALL BE LOCATED ON THE APPROACH SIDE OF THE DOOR AS ONE ENTERS THE ROOM OR SPCE SIGNS THT IDENTIFYEXITS SHALL BE LOCATED ON THE APPROACH SIDE OF THE DOORS AS ONE EXITS THE ROOM OR SPACE.

5. **CHARACTER PROPORTIONS:** RAISED CHARACTERS ON SIGNS SHALL BE SELECTED FROM FONTS WHERE THE WIDTH OF THE UPPER CASE LETTER "O" IS 60 PERCENT MINIMUM ND 110 PERCENT MAXIMUM OF THE HEIGHT OF THE UPPERCASE LETTER "I". STROKE THICKNESS OF THE UPPERCSE LETTER "I" SHALL BE 15 PERCENT MAXIMUM OF THE HEIGHT OF THE CHARACTER.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLYING AND FINISHING PANELS, GENERAL

A. Comply with ASTM C840.

B. Install ceiling panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.

C. Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1/16 inch of open space between panels. Do not force into place.

D. Locate edge and end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.

E. Form control and expansion joints with space between edges of adjoining gypsum panels.

F. Cover both faces of support framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.

1. Unless concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than 8 sq. ft. in area.
2. Fit gypsum panels around ducts, pipes, and conduits.
3. Where partitions intersect structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by structural members; allow 1/4- to 3/8-inch-wide joints to install sealant.

G. Isolate perimeter of gypsum board applied to non-load-bearing partitions at structural abutments. Provide 1/4- to 1/2-inch-wide spaces at these locations and trim edges with edge trim where edges of panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.

H. Attachment to Steel Framing: Attach panels so leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.

I. Wood Framing: Install gypsum panels over wood framing, with floating internal corner construction. Do not attach gypsum panels across the flat grain of wide-dimension lumber, including floor joists and headers. Float gypsum panels over these members or provide control joints to counteract wood shrinkage.

J. STC-Rated Assemblies: Seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C919 and with manufacturer's written instructions for locating edge trim and closing off sound-flanking paths around or through assemblies, including sealing partitions above acoustical ceilings.

2. On partitions/walls, apply gypsum board indicated for base layers and face layers vertically (parallel to framing) with joints of base layers located over stud or furring member and face-layer joints offset at least one stud or furring member with base-layer joints unless otherwise indicated or required by fire-resistance-rated assembly. Stagger joints on opposite sides of partitions.
