

Agriculture Education

Introduction to Agricultural Power and Technology

Course Syllabus

Preliminary Requirements:

Students must be an FFA member and must carry out a Supervised Agricultural Experience (SAE) from at least one of these areas: Entrepreneurship, Placement, Research or Exploratory.

Prerequisites:

Introduction to Agri-science is required.

Course Outline:

“This is an introductory course for students with an interest in agricultural mechanics and power equipment. Content includes importance of agricultural mechanics; personal and employability safety; identifying, using, and maintaining common hand tools; metal fabrication; and preparing and using simple project plans.” Okcareertech.org/aged

Course Overview:

Introduction to Agricultural Power and Technology will introduce students to all areas of Ag mechanics. This course will be helpful in meeting the career goals of any student, not just those who pursue a career in agriculture. Technology will be utilized in this course as well as hands on learning material. Students are required to be members of the FFA as well as participate in Career Development Events, and other educational programs outside of the classroom.
