

Naturalist Discoveries

This bush caught my eye right away!

The blooms come in clusters without a repeating pattern.

They are on the end of branches.

They are in the middle of branches.

They come in clusters of three, four or five.

They covered the bush before the leaves appeared.

I wonder what will happen next!

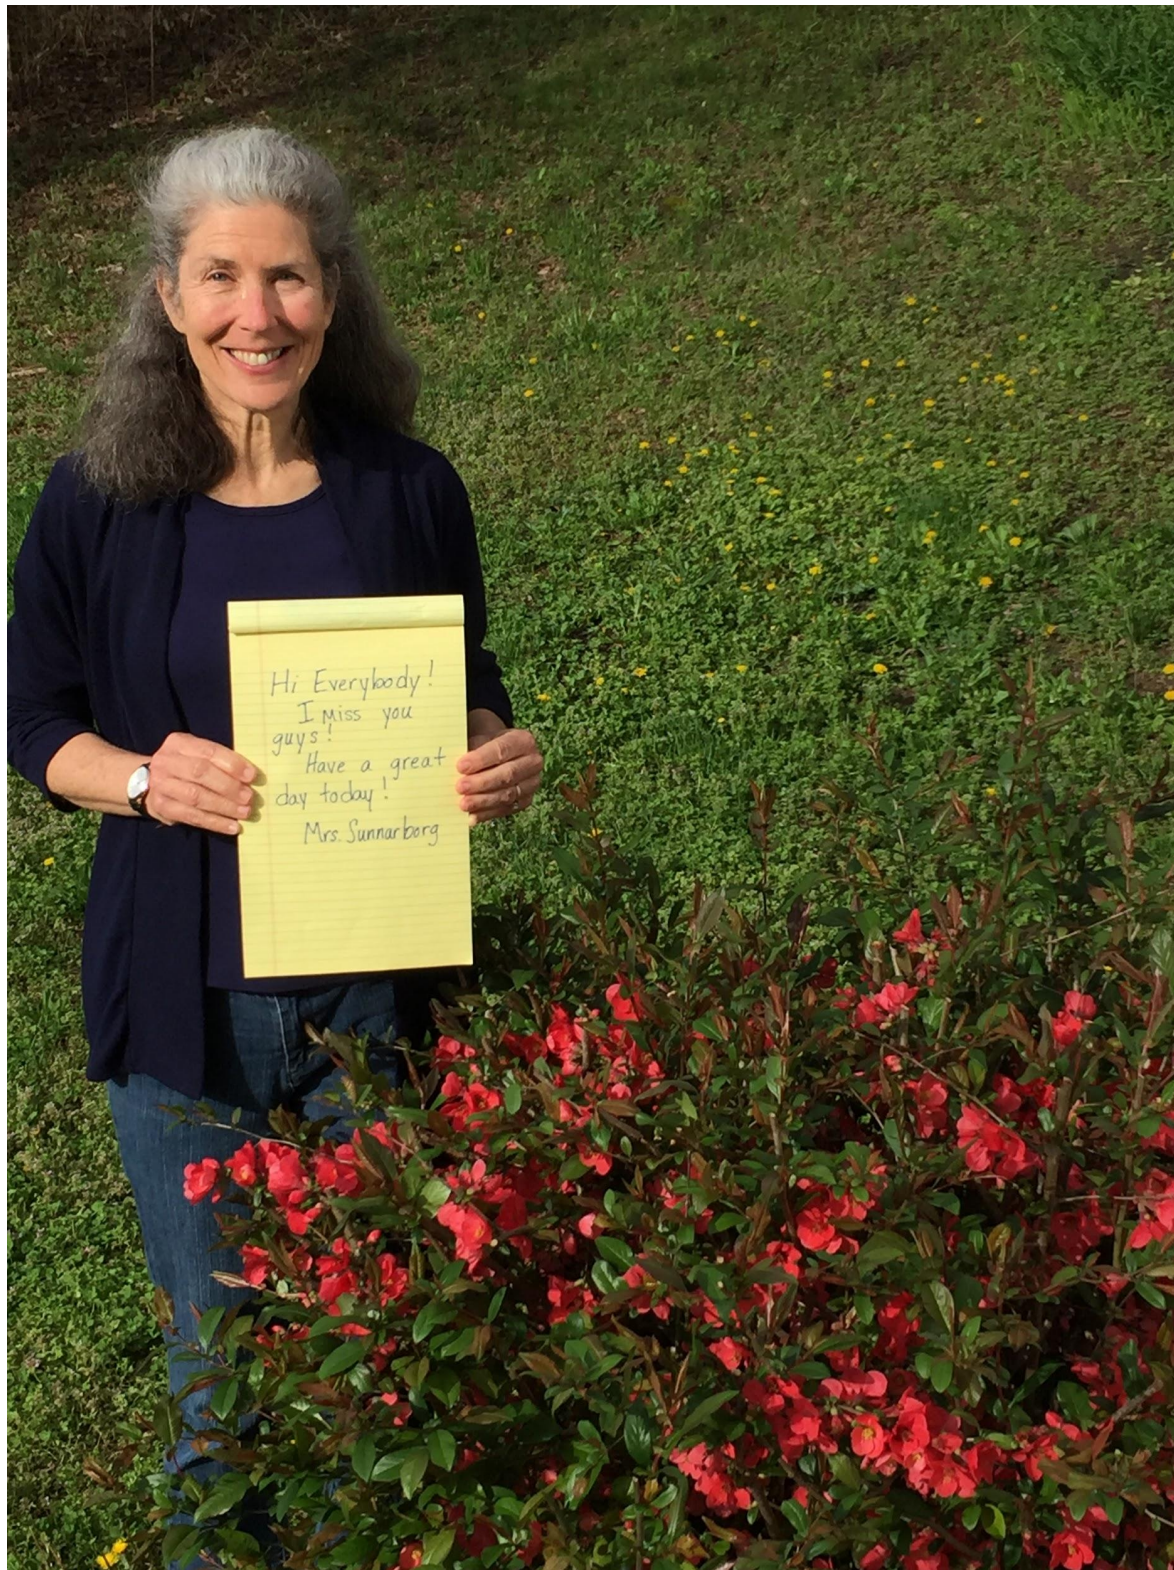

Naturalist Discoveries

Wow! Look how many blooms hang on to the plant here!

Here is the plant once it started to put leaves on!

Hi Everybody!
I miss you
guys!
Have a great
day today!
Mrs. Sunnarberg

Starting Back to School
With a note to all
students!
I decided to use the
bush for my greeting to
students!

I love the new growth
that Spring can bring!

What kinds of changes did you see in plants over the last few weeks?

Describe something you saw...

Did they put on pollen pods?

Did they wilt because of the lack of rain?
