

Most young kids will remember how their family home felt during the coronavirus panic more than anything specific about the virus.

Our kids are watching us and learning about how to respond to stress and uncertainty.

Let's wire our kids for resilience, not panic.

COVID-19 DAILY SCHEDULE

© Jessica McHale Photography

Before 9:00am	Wake up	Eat breakfast, make your bed, get dressed, put PJ's in laundry
9:00-10:00	Morning walk	Family walk with the dog Yoga if it's raining
10:00-11:00	Academic time	NO ELECTRONICS Sudoku books, flash cards, study guide, Journal
11:00-12:00	Creative time	Legos, magnetiles, drawing, crafting, play music, cook or bake, etc
12:00	Lunch	
12:30PM	Chore time	A - wipe all kitchen table and chairs. B - wipe all door handles, light switches, and desk tops. C - Wipe both bathrooms - sinks and toilets
1:00-2:30	Quiet time	Reading, puzzles, nap
2:30-4:00	Academic time	ELECTRONICS OK Ipad games, Prodigy, Educational show
4:00-5:00	Afternoon fresh air	Bikes, Walk the dog, play outside
5:00-6:00	Dinner	
6:00-8:00	Free TV time	Kid showers x3
8:00	Bedtime	All Kids
9:00PM	Bedtime	All kids who follow the daily schedule & don't fight

TALKING WITH YOUR CHILDREN ABOUT COVID-19:

- Centers for Disease Control & Prevention (CDC): Messages for parents, school staff, and others working with children.

Talking with children about Coronavirus Disease 2019: Messages for parents, school staff, and others working with children

As public conversations around coronavirus disease 2019 (COVID-19) increase, children may worry about themselves, their family, and friends getting ill with COVID-19. Parents, family members, school staff, and other trusted adults can play an important role in helping children make sense of what they hear in a way that is honest, accurate, and minimizes anxiety or fear. CDC has created guidance to help adults have conversations with children about COVID-19 and ways they can avoid getting and spreading the disease.

General principles for talking to children

Remain calm and reassuring.

- Remember that children will react to both what you say and how you say it. They will pick up cues from the conversations you have with them and with others.

Make yourself available to listen and to talk.

- Make time to talk. Be sure children know they can come to you when they have questions.

Avoid language that might blame others and lead to stigma.

- Remember that viruses can make anyone sick, regardless of a person's race or ethnicity. Avoid making assumptions about who might have COVID-19.

Pay attention to what children see or hear on television, radio, or online.

- Consider reducing the amount of screen time focused on COVID-19. Too much information on one topic can lead to anxiety.

Provide information that is honest and accurate.

- Give children information that is truthful and appropriate for the age and developmental level of the child.
- Talk to children about how some stories on COVID-19 on the Internet and social media may be based on rumors and inaccurate information.

Teach children everyday actions to reduce the spread of germs.

- Remind children to stay away from people who are coughing or sneezing or sick.
- Remind them to cough or sneeze into a tissue or their elbow, then throw the tissue into the trash.
- Discuss any new actions that may be taken at school to help protect children and school staff.
(e.g., increased handwashing, cancellation of events or activities)
- Get children into a handwashing habit.
 - Teach them to wash their hands with soap and water for at least 20 seconds, especially after blowing their nose, coughing, or sneezing; going to the bathroom; and before eating or preparing food.

- If soap and water are not available, teach them to use hand sanitizer. Hand sanitizer should contain at least 60% alcohol. Supervise young children when they use hand sanitizer to prevent swallowing alcohol, especially in schools and childcare facilities.

Facts about COVID-19 for discussions with children

Try to keep information simple and remind them that health and school officials are working hard to keep everyone safe and healthy.

What is COVID-19?

- COVID-19 is the short name for “coronavirus disease 2019.” It is a new virus. Doctors and scientists are still learning about it.
- Recently, this virus has made a lot of people sick. Scientists and doctors think that most people will be ok, especially kids, but some people might get pretty sick.
- Doctors and health experts are working hard to help people stay healthy.

What can I do so that I don't get COVID-19?

- You can practice healthy habits at home, school, and play to help protect against the spread of COVID-19:
 - Cough or sneeze into a tissue or your elbow. If you sneeze or cough into a tissue, throw it in the trash right away.
 - Keep your hands out of your mouth, nose, and eyes. This will help keep germs out of your body.
 - Wash your hands with soap and water for at least 20 seconds. Follow these five steps—wet, lather (make bubbles), scrub (rub together), rinse and dry. You can sing the “Happy Birthday” song twice.
 - If you don't have soap and water, have an adult help you use a special hand cleaner.
 - Keep things clean. Older children can help adults at home and school clean the things we touch the most, like desks, doorknobs, light switches, and remote controls. (Note for adults: you can find more information about cleaning and disinfecting on [CDC's website](#).)
 - If you feel sick, stay home. Just like you don't want to get other people's germs in your body, other people don't want to get your germs either.

What happens if you get sick with COVID-19?

- COVID-19 can look different in different people. For many people, being sick with COVID-19 would be a little bit like having the flu. People can get a fever, cough, or have a hard time taking deep breaths. Most people who have gotten COVID-19 have not gotten very sick. Only a small group of people who get it have had more serious problems. From what doctors have seen so far, most children don't seem to get very sick. While a lot of adults get sick, most adults get better.
- If you do get sick, it doesn't mean you have COVID-19. People can get sick from all kinds of germs. What's important to remember is that if you do get sick, the adults at home and school will help get you any help that you need.
- If you suspect your child may have COVID-19, call the healthcare facility to let them know before you bring your child in to see them.

What's COVID-19?

COVID-19 is a new type of virus, or illness. Some people call it coronavirus. A virus can make people feel sick.

When someone has COVID-19, they may cough and have a fever. Just because someone is sick doesn't mean they have COVID-19. Other viruses, like the cold or flu, can also make people cough or have a fever.

Most people with COVID-19 can stay at home and rest to get better. They will need to stay home for awhile so that they don't get other people sick.

A few people with COVID-19 may need to go to a hospital so a doctor can help them feel better.

COVID-19 usually doesn't make kids very sick. But there are still some things I should do to keep myself and other people healthy!

I should wash my hands often. I take my time and scrub the soap between my fingers and all over my hands before I wash it off. If I can't wash my hands, then I can use hand sanitizer. By keeping my hands clean, I can help get rid of germs that make people sick!

Coping With Stress During Infectious Disease Outbreaks

What You Should Know

When you hear, read, or watch news about an outbreak of an infectious disease such as Ebola, you may feel anxious and show signs of stress—even when the outbreak affects people far from where you live and you are at low or no risk of getting sick. These signs of stress are normal, and may be more likely or pronounced in people with loved ones in parts of the world affected by the outbreak. In the wake of an infectious disease outbreak, monitor your own physical and mental health. Know the signs of stress in yourself and your loved ones. Know how to relieve stress, and know when to get help.

Know the Signs of Stress

What follows are behavioral, physical, emotional, and cognitive responses that are all common signs of anxiety and stress. You may notice some of them after you learn about an infectious disease outbreak.

YOUR BEHAVIOR:

- An increase or decrease in your energy and activity levels
- An increase in your alcohol, tobacco use, or use of illegal drugs
- An increase in irritability, with outbursts of anger and frequent arguing
- Having trouble relaxing or sleeping
- Crying frequently
- Worrying excessively
- Wanting to be alone most of the time
- Blaming other people for everything
- Having difficulty communicating or listening
- Having difficulty giving or accepting help
- Inability to feel pleasure or have fun

Know When To Get Help

You may experience serious distress when you hear about an infectious disease outbreak, even if you are at little or no risk of getting sick. If you or someone you know shows signs of stress (see list at left) for several days or weeks, get help by accessing one of the resources at the end of this tip sheet. Contact the National Suicide Prevention Lifeline right away if you or someone you know threatens to hurt or kill him- or herself or someone else, or talks or writes about death, dying, or suicide.

Know How To Relieve Stress

You can manage and alleviate your stress by taking time to take care of yourself.

KEEP THINGS IN PERSPECTIVE:

Set limits on how much time you spend reading or watching news about the outbreak. You will want to stay up to date on news of the outbreak, particularly if you have loved ones in places where many people have gotten sick. But make sure to take time away from the news to focus on things in your life that are going well and that you can control.

GET THE FACTS:

Find people and resources you can depend on for accurate health information. Learn from them about the outbreak and how you can protect yourself against illness, if you are at risk. You may turn to your family doctor, a state or local health department, U.S. government agencies, or an international organization. Check out the sidebar on the next page for links to good sources of information about infectious disease outbreaks.

KEEP YOURSELF HEALTHY:

- Eat healthy foods, and drink water.
- Avoid excessive amounts of caffeine and alcohol.
- Do not use tobacco or illegal drugs.
- Get enough sleep and rest.
- Get physical exercise.

YOUR BODY:

- Having stomachaches or diarrhea
- Having headaches and other pains
- Losing your appetite or eating too much
- Sweating or having chills
- Getting tremors or muscle twitches
- Being easily startled

YOUR EMOTIONS:

- Being anxious or fearful
- Feeling depressed
- Feeling guilty
- Feeling angry
- Feeling heroic, euphoric, or invulnerable
- Not caring about anything
- Feeling overwhelmed by sadness

YOUR THINKING:

- Having trouble remembering things
- Feeling confused
- Having trouble thinking clearly and concentrating
- Having difficulty making decisions

USE PRACTICAL WAYS TO RELAX:

- Relax your body often by doing things that work for you—take deep breaths, stretch, meditate, wash your face and hands, or engage in pleasurable hobbies.
- Pace yourself between stressful activities, and do a fun thing after a hard task.
- Use time off to relax—eat a good meal, read, listen to music, take a bath, or talk to family.
- Talk about your feelings to loved ones and friends often.

Take care of your physical health to help lower your stress. Take a break to focus on positive parts of your life, like connections with loved ones.

PAY ATTENTION TO YOUR BODY, FEELINGS, AND SPIRIT:

- Recognize and heed early warning signs of stress.
- Recognize how your own past experiences affect your way of thinking and feeling about this event, and think of how you handled your thoughts, emotions, and behavior around past events.
- Know that feeling stressed, depressed, guilty, or angry is common after an event like an infectious disease outbreak, even when it does not directly threaten you.
- Connect with others who may be experiencing stress about the outbreak. Talk about your feelings about the outbreak, share reliable health information, and enjoy conversation unrelated to the outbreak, to remind yourself of the many important and positive things in your lives.
- Take time to renew your spirit through meditation, prayer, or helping others in need.
